VISION

To establish Sumandeep Vidyapeeth Deemed to be University as a leading center of excellence in research and innovation, advancing healthcare through scientific knowledge, interdisciplinary collaboration, and evidence-based research practices. The University aspires to promote hypothesis-driven, public health-oriented, and high-impact clinical and preclinical research, with a strong emphasis on translational research that bridges the gap between laboratory discoveries and clinical applications, ultimately improving healthcare outcomes and enhancing the quality of life. To establish DCRI as a center of excellence in research, innovation, entrepreneurship, and knowledge translation, contributing to advancements in healthcare, science, technology, and societal development.

MISSION

- To foster a culture of research integrity and scientific excellence across the university by creating an enabling ecosystem for high-quality research, interdisciplinary collaboration, innovation, ethical scientific practices, intellectual property generation, and effective translation of research outcomes into solutions that benefit society.
- To encourage and facilitate faculty members, research scholars, and students in undertaking high-quality, innovative, and impactful research that advances scientific knowledge and healthcare practices.
- To support the preparation and submission of competitive research proposals for securing funding from government agencies, industry, and other national and international research organizations.
- To develop and maintain state-of-the-art research infrastructure and facilities that promote interdisciplinary, collaborative, and translational research.
- To facilitate the generation of locally relevant, evidence-based research findings that contribute to the formulation and improvement of state and national health policies.
- To motivate and support students in undertaking research projects by providing appropriate mentorship, technical guidance, research training, and seed funding.
- To promote and facilitate ethically conducted clinical trials and collaborative research projects sponsored by industry, government agencies, and other research organizations.
- To establish, promote, and implement robust ethical guidelines and regulatory practices for research involving human participants and laboratory animals, ensuring compliance with applicable institutional and national regulations.
- To strengthen research capacity through faculty development programmes, research methodology training, innovation initiatives, and knowledge-sharing activities.
- To encourage the translation of research findings into practical healthcare solutions, innovative technologies, and intellectual property that benefit society.
- To foster a culture of research integrity, scientific excellence, interdisciplinary collaboration, and responsible innovation across the university.
